Teradata Plans Second Global Consulting Center in India

June 12, 2007 at 2:01 PM EDT

Center Will Be Located in Pune

PUNE, India, Jun 12, 2007 (BUSINESS WIRE) -- Teradata, the global leader in enterprise data warehousing and a division of NCR Corporation (NYSE:NCR), today announced plans to open its second Global Consulting Center (GCC) in India. The new GCC will be located in Pune and will be a critical component of the planned growth of its Global Professional Services Consulting.

"We are experiencing substantial growth in Teradata's Global Professional Services consulting, the world's leading data warehouse consultancy. The consulting center team in Pune follows the successful model of our center in Mumbai. It will be an extension of Teradata Professional Services. We expect continuing growth for both centers in India," said David Klumb, vice president of Teradata Global Professional Services.

The center's staff will specialize in data warehousing and business intelligence software, and will offer superior expertise in end-to-end enterprise data warehouse and business intelligence implementation. The new center in Pune, like the center in Mumbai, will serve customers throughout the Americas and parts of the Asia-Pacific region. The centers in India complement other consulting centers opened in the past few years in China.

"We selected Pune because of its solid information technology infrastructure, its state-of-the-art facilities and its high-quality engineering schools with some 20,000 graduates each year," said Klumb. "We are currently seeking highly qualified data warehousing and business intelligence professionals to staff our new center in Pune. They will join Teradata GCC employees who have real-world experience in data warehousing projects in more than 15 countries."

Teradata is opening this center to respond to emerging trends in the global marketplace. In today's competitive environment, data warehousing and business intelligence are regarded as mission critical to organizational success, often as a primary basis for competition.

"A large number of organizations across the world have come to regard data warehousing as the heart of their core infrastructure and a key enabler to empower businesses in their day-to-day decision-making processes," Klumb said. "Our customers leverage their Teradata data warehouses to help them make better, faster decisions to drive growth and profitability."
