

NCR Successfully Implements PROFILE(R) for Community Bank

September 11, 2000 at 10:07 AM EDT

DAYTON, Ohio, Sept. 11 /PRNewswire/ -- NCR Corporation today announced that it has successfully implemented the PROFILE(R) banking application for all six branches of Connecticut-based First National Bank of Litchfield. The new application will allow the bank to improve its management and reporting processes and customer service.

PROFILE is the software that supports core banking functions such as deposits and loan applications. NCR has licensed PROFILE from Sanchez Computer Associates, Inc.

Run in an outsourced environment, the PROFILE application is an ideal account processing solution for small to mid-sized financial institutions. Banks and credit unions do not have to invest in a complex IT infrastructure in order to give their customers the most current technology and better service. NCR hosts the application at its secure and highly available data center in Glastonbury, CT.

"We chose to work with NCR because of their unique outsourcing capabilities and the experience and knowledge of their people. Competition in the small to mid-sized banking market has grown in recent years, so every investment we make has to be a good one. Our decision to outsource to NCR has been a sound one," stated Philip Samponaro, senior vice president at First National Bank of Litchfield.

"NCR is at the leading edge of core processing solutions for financial institutions. We're ready to take this solution to customers across the country," said Jerry Klingler, general manager of Financial Information Services for NCR's Worldwide Customer Services division.

About The First National Bank of Litchfield
