Infinitely Quick Service: Place that Food Order from Virtually Any Device, Any Time, Anywhere

October 19, 2001 at 11:34 AM EDT
DALLAS, Oct 19, 2001 /PRNewswire via COMTEX/ --

With Compris Order Entry Application, restaurant operators can offer customers shorter waits and more convenience

Compris Technologies, Inc., a wholly-owned subsidiary of NCR Corporation (NYSE: NCR), today introduced the food service industry to software that allows customers to place food orders from virtually any device.

With the Compris Order Entry Application, restaurant patrons can place their food and beverage orders from a Web-enabled phone, Web TV, home-delivery call center, hand-held terminal or Web browser. The menu contents are sent to the order entry application on any device in XML format; the order is then placed remotely and sent to a local restaurant for processing.

Once the restaurant receives the order and processes it, the system confirms that the order has been placed and provides an order number and confirmation back to the customer. Additionally, the application supports self-service kiosk devices, which allow customers to place their own orders at the restaurants.

"The food service industry is looking for newer and better ways to meet consumers' expectations for convenience and speedier service," said Guy Dille, Compris' CEO and president. "Our vision is to help retailers reach their mobile and technology-savvy customers wherever they are and allow them to place orders on any device."

The Compris Order Entry Application is being demonstrated to food service executives at the FS/TEC 2001 International Foodservice Technology Exposition, in Dallas Oct. 22-24.
