

Teradata(R) Warehouse Goes into Full-Scale Operation at Fuji Photo Film; Enterprise Data Warehouse Consolidates Financial and Supply Chain Data for Integrated Management

November 28, 2005 at 12:01 PM EST

DAYTON, Ohio, Nov 28, 2005 (BUSINESS WIRE) -- Fuji Photo Film Co., Ltd., announced today that its enterprise data warehouse started full-scale operation in November 2005 with support from Teradata, a division of NCR Corporation (NYSE:NCR), for system building and implementation.

Since last year, Teradata in Japan has been working to build the global data warehouse for consolidation and integrated management of financial data from Fuji Photo Film and its group companies all over the world.

The purpose of the global data warehouse is to store, manage and analyze more data, including overseas supply chain management and environmental data. This gives Fuji Photo Film an enhanced ability to consolidate a wide variety of information for integrated management on a global basis. The company can now manage and analyze fast-changing information on a daily basis to make enterprise business decisions quickly considering the business as a whole, not only individual business units.

The Fuji Photo Film data warehouse is based on NCR servers and the Teradata platform to cope with anticipated increases in data and applications. The global data warehouse employs the Teradata Manufacturing Logical Data Model that serves as a blueprint for building a data warehouse.

The global data warehouse project, led by Fuji Photo Film and Fuji Film Computer Systems Co., Ltd., is supported by BearingPoint, Inc., for requirements definition and by NCR in Japan for system building.
